

Emerging Markets & Tech biased US portfolio blend

A three-fund strategic blend combining broad U.S.large-cap exposure via an equal-weighted S&P500 sleeve,growth-oriented U.S. mega-cap technology via the Nasdaq-100, and a dominant emerging-markets allocation. The result is a globally diversified portfolio tilted toward growth and non-U.S. expansion.

WHY THIS PORTFOLIO?

Global Diversification

Blends U.S.large-cap, U.S.growth/tech, and emerging-market equities in one model.

Equal-Weight Core

RSPsleevereducesmega-cap concentration risk versus a market-cap-weighted S&P 500.

Growth Tilt

QQQMaddsconcentrated exposure to leading U.S. technology and innovation names.

EM Growth Engine

60%IEMGweight targets long-term growth from Taiwan, Korea, China, and India.

INVESTMENT OBJECTIVE

This model seeks long-term capital appreciation by combining a low-cost, equal-weighted U.S. large-cap core (**RSP**), a concentrated U.S. growth/technology sleeve (**QQQM**), and a dominant, broad-based emerging-markets allocation (**IEMG**) — balancing developed-market stability with higher-growth, higher-volatility EM exposure.

Target weights: 60% IEMG / 20% RSP / 20% QQQM rebalanced periodically to target.

As of Jun 30, 2026 fact sheets. Each fund's own NAV total return. "Blended Portfolio" = weighted average of the three funds' figures at target weights (see methodology note below). QQQM lacks a 10-year track record (inception Oct 2020).

Methodology. Blended Portfolio figures are a weighted average of each underlying ETF's own reported NAV total return, using current target weights (20% RSP / 20% QQQM / 60% IEMG). This is a simplified, static-weight illustration — it does not reflect an actual live, periodically-rebalanced track record, transaction costs, taxes, or historical drift in weights, and will differ from a true compounded blended return.

2 CALENDAR YEAR RETURNS (% , NAV)

GLOSSARY — KEY TERMS ON THIS PAGE

NAV Total Return

Performance based on each fund's net asset value, reflecting the value of underlying holdings.

Blended Portfolio

A weighted average of the three underlying funds' figures at target weights — see methodology note above.

P/E &P/BRatio

Price-to-earnings and price-to-book of the underlying holdings, weighted-averaged across the three funds.
