

Asia Semiconductor & Tech Innovation Model

A concentrated, thematic allocation to the global semiconductor and technology-innovation value chain, built from four complementary ETFs spanning U.S. chip leaders (SOXX), China's STAR Market innovators (KSTR), broad Asia semiconductor manufacturers (Global X Asia Semiconductor, 3119.HK), and Greater China technology platforms (iShares Hang Seng TECH, 3067/9067.HK). The blend targets diversified exposure across the AI and semiconductor supply chain — from design and equipment to foundries and end-market platforms — across the U.S., Taiwan, South Korea, Japan, and China.

THE MODEL — COMPOSITION

	iShares Semiconductor ETF (SOXX)		35%
	Global X Asia Semiconductor ETF (3119.HK)		30%
	iShares Hang Seng TECH ETF (3067/9067.HK)		20%
	KraneShares ICBCUBS SSE STAR Market 50 UCITS ETF (KSTR)		15%

WHY THIS MODEL?

**Full Value-Chain Coverage**

Combines U.S. chip designers & equipment makers (SOXX) with Asian foundries, memory, and platform names — spanning the entire semiconductor and AI supply chain.

**China Innovation Access**

KSTR adds pure-play exposure to China's STAR Market — the listing venue for the country's most advanced chip and tech unicorns.

**Asia Manufacturing Core**

Global X Asia Semiconductor (3119.HK) captures Taiwan, Korea, and Japan foundry/equipment leaders like TSMC, Samsung, and SK Hynix.

**Platform & Consumer Tech**

Hang Seng TECH adds Greater China internet and consumer-tech platforms (Tencent, Alibaba, Meituan), diversifying beyond pure semiconductors.

INVESTMENT OBJECTIVE

The model seeks long-term capital appreciation by combining four passively-managed ETFs to deliver diversified, thematic exposure to the global semiconductor, AI-infrastructure, and technology-innovation ecosystem across the United States and Asia, while balancing U.S. mega-cap chip exposure against faster-growing but more volatile China/Asia innovation and platform names.

AI INVESTMENT VALUE CHAIN			
Layer	Category	Presentation Allocation %	Investment Role
1	Infrastructure	15.00%	Semiconductor manufacturing equipment, fabrication, testing, packaging and advanced hardware infrastructure
2	Semiconductors	55.00%	GPUs, CPUs, AI accelerators, foundries, memory and semiconductor manufacturers
3	Connectivity	9.00%	Networking, high-speed connectivity, optical/interconnect and AI deployment infrastructure
4	Intelligence	5.00%	AI models, AI platforms, digital platforms and AI-enabled software
5	Applications	16.00%	AI-enabled consumer, enterprise and physical-world applications, robotics and autonomous technologies

BLENDED GEOGRAPHY

★TOP 10 COMBINED HOLDINGS (MODEL-WEIGHTED)

#	COMPANY	PRIMARY SOURCE FUND(S)	MODEL WT.
1	Taiwan Semiconductor Mfg. (TSMC)	SOXX, GX Asia Semi	6.22%
2	Samsung Electronics	GX Asia Semi	3.53%
3	SK Hynix	GX Asia Semi	3.39%
4	NVIDIA Corp	SOXX	3.14%
5	Advanced Micro Devices (AMD)	SOXX	2.87%
6	Broadcom Inc	SOXX	2.85%
7	Micron Technology	SOXX	2.75%
8	Cxmt Corp	KSTR, GX Asia Semi	2.24%
9	Intel Corp	SOXX	1.91%
10	Cambricon Technologies	KSTR, GX Asia Semi	1.90%
Top 10 Combined Weight			30.79%

Model-weighted % = each holding's in-fund weight × the fund's target allocation, summed across funds where a name appears in more than one. Reflects holdings as of Aug 6–7, 2026 (SOXX, Hang Seng TECH, GX Asia Semi) and Aug 7, 2026 (KSTR).

%PORTFOLIO CHARACTERISTICS (WEIGHTED WHERE AVAILABLE)

WTD. EXPENSE RATIO	COMBINED HOLDINGS	WTD. P/E (SOXX+HSTECH)	WTD. P/B (SOXX+HSTECH)
0.50%	~152	42.6x	8.5x

P/E and P/B blend only funds that disclose the metric (SOXX weight 35%, Hang Seng TECH weight 20%, reweighted to 63.6%/36.4%); KSTR and GX Asia Semiconductor do not publish these ratios in their fact sheets.

⚠RISK CONSIDERATIONS

⚠ Sector concentration: ~82% blended weight in Information Technology / semiconductors.
⚠ Country concentration: China + U.S. together are ~71% of the blend; Taiwan, Japan and Korea add further Asia exposure.
⚠ China/EM risk: ~40% blended exposure to China carries policy, currency and liquidity risks.
⚠ Currency risk: Underlying funds are denominated in USD, HKD and RMB; returns are subject to FX movements.
⚠ High volatility: Semiconductor and China tech names can experience large swings.

✓SUITABLE FOR

✓ Investors with high conviction in AI / semiconductor secular growth.
✓ Long-term investors (5–10+ yrs) comfortable with sharp drawdowns.
✓ Portfolios seeking blended U.S. + Asia tech exposure in one model.
✓ Investors wanting China innovation access alongside U.S. chip leaders.
✓ Satellite/thematic allocation rather than a core equity holding.

Sources: iShares/BlackRock (SOXX, Hang Seng TECH fund holdings, Aug 2026), KraneShares (KSTR holdings, Aug 7 2026), Global X / Mirae Asset (3119.HK holdings, Aug 2026). Sector and geography figures are Claude-computed weighted blends across the four funds' latest disclosed holdings. Past performance is not indicative of future results.

ANNUALIZED PERFORMANCE (NAV, %) — AS OF JUNE 30, 2026

GLOSSARY — KEY TERMS ON THIS PAGE

Model Blend

Weighted average of each underlying fund's own NAV return, using target model weights (35/30/20/15%).

NAV Total Return

Performance based on each fund's net asset value, reflecting the value of underlying holdings.

Reweightings

When a fund lacks data for a period, remaining funds are scaled up proportionally so weights still sum to 100%.

Cross-Currency Note

Underlying funds report in USD, HKD, and RMB; the blend does not adjust for FX translation between them.

Sources: iShares/BlackRock Fund Fact Sheets (SOXX, Hang Seng TECH) as of Jun 30, 2026; KraneShares Fact Sheet (KSTR) and Global X/Mirae Asset Fact Sheet (3119.HK) as of 30 Jun 2026. Model blend calculations by Claude using target weights supplied by the user. Past performance is not indicative of future results.
