COMBINED HOLDING LINES

Weighted figures blend each fund's own NAV-basis figures using target model weights (QQQM 30% · RSP 30% · IWM 40%). Combined holdings count reflects total lines across the three funds before removing overlap. Data as of Aug 31, 2026 (QQQM, RSP fact sheets) / Aug 31, 2026 (IWM holdings).

30%

iShares Russell 2000 ETF (IWM - US Small Cap)

40%

✓ WHY THIS MODEL?

● Mega-Cap Growth Engine

QQQM concentrates in the 100 largest non-financial Nasdaq companies — the AI, platform, and mega-cap growth names driving U.S. market leadership.

▲ De-Concentrated Large-Cap Core

RSP equally weights all 500 S&P constituents trimming mega-cap dominance and adding meaningful exposure to mid-sized S&P names across every sector.

□ Small-Cap Breadth

IWM tracks the Russell 2000, giving the model true small-cap exposure (2,004 holdings) — a segment largely absent from mega-cap-driven portfolios.

▣ Full Market-Cap Spectrum

Combining all three funds spans the entire U.S. equity market-cap spectrum in one model — mega-cap growth, broad large-cap, and small-cap — in a single blended sleeve.

✦ INVESTMENT OBJECTIVE

The model seeks long-term capital appreciation by combining three passively-managed, low-cost U.S. equity ETFs to deliver diversified exposure across the full domestic market-cap spectrum — pairing Nasdaq-100 mega-cap growth leadership with the de-concentrated breadth of an equal-weighted S&P 500 and the cyclical upside/volatility of U.S. small-caps, for investors seeking a single-model, all-U.S. core equity allocation.

#	COMPANY	PRIMARY SOURCE FUND(S)	MODEL WT.
1	NVIDIA Corp	QQQM, RSP	2.60%
2	Apple Inc	QQQM, RSP	2.26%
3	Alphabet Inc (Cl. A + C)	QQQM, RSP	1.99%
4	Microsoft Corp	QQQM, RSP	1.85%
5	Amazon.com Inc	QQQM, RSP	1.47%
6	Micron Technology Inc	QQQM, RSP	1.37%
7	Advanced Micro Devices (AMD)	QQQM, RSP	1.12%
8	Broadcom Inc	QQQM, RSP	1.02%
9	Meta Platforms Inc	QQQM, RSP	0.90%
10	Tesla Inc	QQQM, RSP	0.81%
Top 10 Combined Weight			15.39%

Model-weighted % = each holding's in-fund weight × the fund's target allocation, summed where a name appears in more than one fund. IWM (Russell 2000) holds none of the above names, so its 40% weight is spread across ~2,000 small-cap positions instead. Reflects holdings as of Aug 31, 2026 (QQQM, RSP) and Aug 31, 2026 (IWM).

% PORTFOLIO CHARACTERISTICS (WEIGHTED)

WTD. EXPENSE RATIO 0.18%	COMBINED HOLDINGS 2,611	WTD. P/E 24.31x	WTD. P/B 4.96x
------------------------------------	-----------------------------------	---------------------------	--------------------------

P/E and P/B blend each fund's own disclosed ratio (QQQM P/E 34.45x / P/B 10.24x, RSP P/E 21.07x / P/B 3.34x, IWM P/E 19.13x / P/B 2.22x) at target model weights (30/30/40).

⚠ RISK CONSIDERATIONS

Sector concentration: ~31% blended weight in Information Technology, driven mainly by QQQM's mega-cap tech tilt; no other sector exceeds ~13%.

Style/cap-size dispersion: the model spans mega-cap growth (QQQM), broad large-cap blend (RSP), and small-cap (IWM) — return drivers and volatility differ meaningfully across the three sleeves.

Small-cap risk: IWM's 40% weight brings small-cap volatility, wider bid/ask spreads, and greater sensitivity to economic cycles and rate changes than large-cap sleeves.

Non-US exposure: ~99% of the blend is U.S.-domiciled; QQQM contributes a small (~1%) residual weight to foreign-domiciled, Nasdaq-listed companies.

Concentration within QQQM: QQQM's top 10 holdings alone are ~45% of that fund, so its 30% model weight carries single-stock concentration risk (e.g., NVIDIA, Apple, Microsoft).

High volatility (growth sleeve): QQQM has shown large historical swings (e.g., -32.45% in 2022, +54.92% in 2023); the blend dampens but does not eliminate this.

✓ SUITABLE FOR

- ✓ Investors seeking a single-model, all-U.S. core equity allocation spanning the full market-cap spectrum
- ✓ Long-term investors (5–10+ yrs) comfortable with sharp mega-cap growth drawdowns
- ✓ Portfolios wanting mega-cap tech leadership balanced against equal-weight and small-cap diversification
- ✓ Investors who want reduced concentration risk versus a pure Nasdaq-100 or S&P 500 cap-weighted allocation
- ✓ Core/satellite U.S. equity sleeve rather than a globally diversified standalone holding

*QQQM and RSP net assets estimated as the sum of disclosed holdings' market value; the fact sheets do not publish Net Assets directly (unlike IWM).

GLOSSARY — KEY TERMS ON THIS PAGE

Model Blend

Weighted average of each underlying fund's own NAV return, using target model weights (30/30/40%).

NAV Total Return

Performance based on each fund's net asset value, reflecting the value of underlying holdings.

Reweighting

When a fund lacks data for a period, remaining funds are scaled up proportionally so weights still sum to 100%.

Equal Weight

RSP holds all S&P 500 constituents at roughly equal weight rather than by market capitalization, reducing mega-cap concentration.
